DO MAI ANH

Software Developer

maianhdo20042303@gmail.com | 0899 463 504 | github.com/maianh-233

Professional Summary

Final-year Software Engineering student at Saigon University with experience contributing to software development at Samset Solutions and building personal software projects. Familiar with Java, Spring Boot, React, TypeScript, REST APIs, relational databases, and application security. Interested in backend and full-stack development, with a focus on business logic, maintainable code, and practical software engineering.

Technical Skills

Programming Languages	Java, JavaScript (ES6+), TypeScript, C#
Frontend	React, Next.js, Vite, HTML5, CSS3, Tailwind CSS, Responsive Design
Backend	Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring Security, ASP.NET MVC, REST APIs
Databases	PostgreSQL, MySQL, MariaDB
Tools	Git, GitHub, Postman, Visual Studio Code, Figma, Canva
Additional Exposure	Node.js, MCP, Claude Agent SDK, Redis, Kafka, WebSocket/STOMP

Professional Experience

Samset Solutions

Software Development Experience

- Contributed to recruitment management modules to support recruitment workflows and internal operations.
- Participated in developing material management features for organizing and tracking internal resources.
- Worked on learning-path management and class progress tracking features to support learning activities and monitor learner progress.
- Participated in building AI-powered tools and supporting AI-assisted workflows for internal use.
- Supported user interface development for company projects, implementing interface components based on project requirements.

Personal Projects

Lunaria Boutique – Multi-Store Fashion E-commerce System

Java 21, Spring Boot, Spring Security, JWT, PostgreSQL, Kafka, Redis, WebSocket/STOMP, React 19, Tailwind CSS

Personal Project | github.com/maianh-233/Fashion-System

- Built a monolithic multi-store fashion e-commerce platform with a customer storefront and an admin back office covering POS sales, inventory, orders, promotions, and staff management.
- Implemented store-level inventory with goods receipts, goods issues, and stock reservations, using pessimistic locking to prevent overselling under concurrent orders.
- Developed order and payment flows with COD, VNPay, and MoMo (signed callbacks, scheduled expiry of unpaid orders), multi-store fulfillment, refunds, and Lalamove delivery via webhooks.
- Secured the system with Spring Security and JWT, Google Sign-In, email OTP password reset, and role/permission-group authorization scoped to each store.
- Built a realtime notification pipeline: events are published to Kafka after transaction commit, stored idempotently, and pushed to browsers over WebSocket/STOMP.
- Implemented business audit logging with a transactional outbox, Kafka consumers, and daily reconciliation; added Redis caching for read-heavy endpoints.

Layout_Agent – AI Agent Skill for SRS-to-UI Design

Claude Code, Agent Skills, Claude Design, Markdown

Personal Project | github.com/maianh-233/Layout_Agent

- Designed a multi-step Claude Code agent skill that turns Software Requirements Specification (SRS) documents into a self-contained UI design specification for Claude Design.
- Defined the analysis step to extract roles, functional requirements, business rules, data entities, screens, and user flows, each traced back to its source in the SRS.

- Added mandatory checkpoints that detect missing, ambiguous, or conflicting requirements and ask the user instead of guessing.
- Created a reusable design-rule set (platform, grid, spacing, typography, colors) collected from the user and applied consistently across all screens.
- Specified a change-request workflow that classifies client revisions, maps their impact to screens and components through stable IDs, and keeps a version history.

FreshMart – Convenience Store Management Application

Java 21, Java Swing, Hibernate ORM, MySQL/MariaDB, Maven

Personal Project | github.com/maianh-233/ConvenienceStore_Ver2

- Built a desktop application for convenience store management with modules for sales, products, imports and exports, customers, employees, suppliers, promotions, and statistics.
- Organized the code into a layered architecture (GUI, business, DAO) using Hibernate ORM with C3P0 connection pooling.
- Implemented authentication with BCrypt, JWT access and refresh tokens, login-attempt limiting, and email OTP password reset; menus are shown based on role permissions stored in the database.
- Added Excel import with data validation (Apache POI), PDF document printing (iText), statistics charts (JFreeChart), and image upload to Cloudinary.

Education

Saigon University

Bachelor's Degree in Software Engineering

2022 – Present **GPA: 3.35/4.00**

Final-year student; graduation pending.
